Grade points

When grading an activity it is possible to use a grading scale, a grade point (numerical scale) or neither.

A teacher may select grade points by going to the *Edit settings* screen of an activity, for example an assignment,scrolling to 'Grade' and then selecting 'Point' from the *Type* dropdown:

This will open up the Maximum points field and the teacher can enter the maximum points they wish to use for this activity. (Note that if they choose a number higher than that set by the administrator in *Site administration>Grades>General settings*, they will see a warning message and not be allowed to save their choice.)

The default number of points a teacher sees when choosing points from the Type dropdown is set by the administrator (See section on Site administration settings)

Site administration settings

An administrator can specify the maximum grade points value and the default grade points value from Site administration>Grades>General settings.

Grade point maximum gradepointmax	250	Default: 100
	This setting determines the maximum grade point value available in an activity.	
Grade point default gradepointdefault	200	Default: 100
	This setting determines the default value for the grade point value available in an activity.
