Patient Name : **Amal Prakash**

DOB/SEX : 20.06.2000 / M

Patient ID : **16D665**

Admission Type : OutPatient

Approved BY :Dr.Jeslean Jose

Accession No : 218430

X-RAY KNEE AP, LAT of 03.11.2016:

An ill defined sclerotic lesion with wide zone of transition is seen involving the distal metadiaphyseal region of the right femur with multilamellated periosteal reaction and uplifting of the periosteum.

Associated soft tissue component identified in the medial aspect of the thigh which shows evidence of osteoid matrix.

No definite other lytic/ sclerotic lesions in the rest of the visualised bones. Tibiofemoral joint space appears reduced.

Imp: Findings are in favour of an aggressive neoplasm.

Dr.Jeslean Jose

Senior Resident
