Note: The results relate only to the specimens tested and should be correlated with clinical findings

Interpretation guidance:

- 1.Testing of referred clinical specimens was considered on the basis of request/referral received from/ through state surveillance officer(SSO) of concerned State Integrated Disease Surveillance Programme / any other health care facility affirming requirements of the case definition/s
- 2.A single negative test result, particularly if this is from an upper respiratory tract specimen,does not exclude infection*
- 3.A positive test result is only tentative, and will be reconfirmed by retesting.
- 4.Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe or progressive disease. The repeat specimens may be considered after a gap of 2-4 days after the collection of the first specimen for additional testing if required*
- 5.A positive alternate pathogen does not necessarily rule out either, as little is yet known about the role of coinfections.
- 6.Please note that these results are not to be used for any thesis or presentations or publication in any journal without the prior permission of the Director General, ICMR
